Professional Summary

MCA graduate with strong knowledge of Python, Flask, SQL, HTML, CSS, JavaScript, MySQL and AI-based application development. Built multiple end-to-end web applications with secure authentication, CRUD operations and database integration. Passionate about software engineering and eager to contribute to innovative development teams.

Education

Master of Computer Applications

2023 - 2025 📅

HINDUSTHAN COLLEGE OF ARTS AND SCIENCE

Coimbatore, Tamil Nadu, India 📍

CGPA: 8.30/10.00

Bachelor of Commerce with Computer Application

2020 - 2023 📅

SACRED HEART COLLEGE (AUTONOMOUS)

Tirupattur, Tamil Nadu, India 📍

CGPA: 8.31/10.00

Technical Skills

- **Languages:** Python, SQL, HTML & CSS, JavaScript
- **Frameworks:** Numpy, Flask, OpenCV, DeepFace
- **Database:** MySQL
- **Tools & Platforms:** VS Code, PyCharm, Jupyter Notebook, MySQL Workbench, GitHub

Soft Skills

- Problem Solving
- Communication
- Team Collaboration
- Adaptability
- Time Management
- Quick Learning

Languages Known

- English
- Tamil

Projects

Project Title: FinTrack – Smart Personal Expense & Income Tracker

Technologies Used: Python (Flask), HTML, CSS, JavaScript, SQL

Tools : VS Code, MySQL Server, Web Browser (for frontend testing)

Project Overview: Developed a full-stack personal finance management web application that allows users to register, log in, and securely manage income and expense transactions. Implemented session-based authentication and built dynamic features for tracking financial data, including adding incomes/expenses, calculating balance, displaying transaction history, and deleting individual transactions. Also implemented a complete account deletion feature that removes all user data. Designed a responsive, user-friendly interface using HTML, CSS, and JavaScript, and handled backend routing and logic using Flask and MySQL.

Project Title: AI-Based Disease Prediction and Healthcare Management System

Technologies Used: Python, HTML, CSS, JavaScript, SQL, Flask

Tools : VS Code, MySQL Server, Web Browser (for frontend testing)

Project Overview: Developed a full-stack healthcare management web application with secure user authentication for Patients, Doctors, and Administrators. Implemented AI-based disease prediction using a machine learning model, along with patient profile management, doctor appointments, medical history tracking, and an admin dashboard. Built the backend using Flask and MySQL, and designed a responsive user interface using HTML, CSS, and JavaScript.

Project Title : Live Face Identification System

Technologies Used : Python, OpenCV, DeepFace, Haar Cascades, shutil, os, time

Tools : PyCharm, Webcam

Project Overview: Developed a real-time, CPU-optimized face identification system using Python, OpenCV, and DeepFace. This project focuses on efficient live recognition by leveraging Haar Cascades for fast detection and VGG-Face for robust identification, with performance enhanced through frame skipping and reduced resolution processing. It features a comprehensive enrollment process and allows for flexible data management, including the ability to delete specific individual profiles.

Certifications

- **FULL STACK DEVELOPMENT WITH PYTHON – BESANT TECHNOLOGIES, CHENNAI**
- **PYTHON ESSENTIALS 1 & 2 – CISCO NETWORKING ACADEMY**
- **INTRODUCTION TO NUMPY - SIMPLILEARN**
- **FRONT END DEVELOPMENT - HTML & CSS - GREAT LEARNING**
